

## **The FlyFisher Concept:**

This vehicle is designed for the upper executive who works a high profile job. His release is his fly fishing. He travels the globe in search of the largest peacock bass out there. The vehicle is used to seek out the secluded fishing spots. For this purpose he needs the most capable purpose-built vehicle available. During the week, he searches the internet for locations and stories of great fishing experiences. On Thursday night he downloads his map software with GPS points to his on board navigation and Friday lunch time he is off with his aficionado buddy in search of adventure, camping under the stars, and great fishing.

His vehicle has an on board fridge/freezer to place his catch; navigation equipment to chart his ever-changing course and possibly fishing kayaks to reach those secret spots on the rivers and lakes; recovery equipment including a front mounted Warn 9.5ti Thermometric winch and a Warn works utility winch; Built in water tank for showers and high pressure washing of gear; Old Man Emu suspension designed for on and off-road comfort and ARB lockers so that he has on demand traction capability. His choice of lights were a simple one - the best, most compact IPF systems available. His tires needed to have the capability of carrying heavy loads on a strong tread pattern and more importantly, the ability to displace mud in the boggy areas surrounding the banks of the rivers - the new Firestone Destination M/T were the tire of choice with UNI-T® technology. Inside comfort includes sound proofing, custom carbon fiber vinyl seats and custom carpets. The Hannibal USA roof top tent makes for the most comfortable outdoor camping under the stars in any weather condition. Most importantly, because of the challenging terrain roll over protection (roll cage) was built by Safety Devices.

This vehicle was custom built from the ground up by Rover Accessories ([www.RoverAccessories.com](http://www.RoverAccessories.com)) where every attention to detail and customer demand was fulfilled. Rover Accessories has evolved as one of the leaders in custom building Land Rovers for overland expedition and as suppliers of some of the most unique after market and off road accessories.

*The FlyFisher vehicle was sponsored by the following:*

- **Rover Accessories** (Designed concept and built the vehicle from the frame up)
- **Hannibal USA** (Roof top tent)
- **Bridgestone/Firestone North America** (*NEW* Destination M/T tires)
